

# School Lunch Installation

## Macintosh OSX-Single User Setup

Complete the following steps to install School Lunch on a Macintosh OSX computer.

1. Download the latest version of School Lunch from the Rodlan Downloads Website. The download is in a .zip format.

2. Create a **School Lunch folder** in a location where you would like to locate the lunch program. *School Lunch* requires that the data file be located in the same folder as the executable. Many users choose to install on the desktop or on the hard drive.

3. Copy the unstuffed *School Lunch 2012* to the **School Lunch folder** you created in step 2 above.

4. Copy the *SLReg2012-xxxxxx.sl* file from the registration email from Rodlan to the same folder.

5. A copy of the *School Lunch* data file needs to be located in the **School Lunch folder** along side the *School Lunch 2012.exe* file as shown in the figure above. The first time you run the *School Lunch 2012* program you will be advised that you do not have a data file and the program will ask if you would like a data file to be created. If you are running *School Lunch* for the first time, choose to create a new data file. Quit the program and start the program again to have the *School Lunch* recognize the data file. If for some reason you are unable to create an empty data file, one can be downloaded from the download page.

6. If you are updating *School Lunch* from version 2011, simply copy the *SLD2011.rsd* file from your old program to the 2012 program folder you created above.

For help installing *School Lunch* on a network please contact tech support directly at 435-752-8503.
