

# School Lunch Installation Instructions

## Windows-Single User Setup

Complete the following steps to install School Lunch on a Windows computer.

1. Download the latest version of School Lunch from the Rodlan Downloads Website. The download is in a .zip format.
  2. Create a School Lunch folder in a location where you would like to locate the lunch program. School Lunch requires that the data file be located in the same folder as the executable. Many users choose to install on the desktop or on the C: drive.
  3. Copy School Lunch 2015.exe and School Lunch 2015 Libs folder and the Resource folder to the School Lunch folder you created in step 2 above.
  4. Copy the SLReg2015-xxxxxx.sl file from the registration email from Rodlan to the same folder.
  5. A copy of the School Lunch data file needs to be located in the School Lunch folder along side the School Lunch 2015.exe file as shown in the figure above. The first time you run the School Lunch 2015 program you will be advised that you do not have a data file and the program will ask if you would like a data file to be created. If you are running School Lunch for the first time, choose to create a new data file. Quit the program and start the program again to have the School Lunch recognize the data file. If for some reason you are unable to create an empty data file, one can be downloaded from the download page.
  6. If you are updating School Lunch from version 2011 or later, simply copy the SLD2011.rsd file from your old program to the 2015 program folder you created above.
